Abstracts

Photochromic lenses are optical lenses that darken on exposure to specific types of light of sufficient intensity, typically ultraviolet (UV) radiation. Photochromic lenses can be made of glass, polycarbonate, or another plastic. They are principally used in eyeglasses that are dark in bright sunlight, but clear in low ambient light conditions. They darken significantly within about a minute of exposure to bright light, and take somewhat longer to clear. A range of clear and dark transmittances are available.
