Abstracts

Photonic crystals are regular optical structures made of media with different refractive indices arranged periodically. This material has a photon band gap and can block photons of a specific frequency, which affects photon movement. This effect is similar to the effect of semiconductor crystals on electronic behavior.

Based on the Photonic Crystal market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
