Abstracts

Photovoltaic Panels are devices that directly or indirectly convert solar radiation into electrical energy by absorbing sunlight and converting solar radiation to photovoltaic or photochemical effects. The main material of most solar panels is “silicon”, but due to the high cost of production it has certain limitations for universal application. Compared to ordinary batteries and rechargeable batteries, solar cells are more environmentally friendly and green products.

Based on the Photovoltaic Panels market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
