Abstracts

Piezoelectric materials constitute various types of ceramics, polymers, crystals, and composites that can generate a voltage when subjected to external pressure or, conversely, expand when a voltage is applied. The response of the piezoelectric material to the mechanical force/pressure that causes the charge/voltage to be generated is referred to as the direct piezoelectric effect. In contrast, the application of charge/field that causes mechanical stress or strain is referred to as the opposite piezoelectric effect.

Based on the Piezoelectric Materials market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
