Abstracts

Pipette tips, sometimes spelled pipet tips, are used with pipettes and pipettors to speed processing and reduce cross-contamination. They are available in a variety of materials and styles. Universal pipette tips are used with most standard-diameter pipettes. They are usually made of polypropylene and disposable.

A pipette (sometimes spelled pipet) is a laboratory tool commonly used in chemistry, biology and medicine to transport a measured volume of liquid, often as a media dispenser. Pipettes come in several designs for various purposes with differing levels of accuracy and precision, from single piece glass pipettes to more complex adjustable or electronic pipettes. Many pipette types work by creating a partial vacuum above the liquid-holding chamber and selectively releasing this vacuum to draw up and dispense liquid. Measurement accuracy varies greatly depending on the style.
