## Abstracts

Piston Aircraft have one or more piston-powered engines connected to the propeller(s), which provide thrust to move the aircraft on the ground and through the air. Piston-powered aircraft most commonly use 100 octane low-leaded fuel and fly at altitudes below 15,000 feet. The inside of a typical piston aircraft seats 1-6 passengers is configured similar to the interior of a small car. Piston aircraft used for business typically fly relatively short missions of 300-400 miles, using very small general aviation airports that are often without air traffic control towers.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Piston Aircraft market covering all its essential aspects.
