## Abstracts

The piston accumulator is a high-pressure piston accumulator and relates to the technical field of hydraulic auxiliary components, which solves the technical problem of increasing the service life and the pressure of use. The accumulator includes a cylinder, a piston installed in the cylinder, and an oil side connecting flange and a gas side connecting flange respectively fixed at both ends of the cylinder; the oil side connecting flange is provided with an oil hole; The gas side connecting flange is provided with an inflation nozzle, and the piston is provided with a ring guiding groove, a ring oil storage groove, a ring sealing groove, a ring gas storage groove and a ring guiding groove in the axial direction. And a guiding belt is disposed in the two guiding belt grooves, and a combined sealing member is arranged in the sealing groove; a check valve is arranged at each end of the piston, and an inlet of the one-way valve communicates with the piston cylinder surface. An oil storage tank, the outlet of the one-way valve is connected to the oil chamber, and the inlet of the other one-way valve is connected to the gas storage tank of the piston cylinder surface, and the outlet of the one-way valve is connected to the air chamber. The accumulator provided by the invention effectively prevents gas from infiltrating into the oil.
