Abstracts

Bioplastic is a plastic derived from a renewable biomass source, such as from vegetable oil, corn starch, pea starch or microbiota. Common plastics, such as fossil fuel plastics, are refined from petroleum, which rely more on fossil fuels and produce more greenhouse gases. Some, but not all, bioplastics are biodegradable plastics. Biodegradable bioplastics can decompose in an oxygen-free or aerobic environment, depending on how they are made. Bioplastics can be composed of a wide variety of materials including: starch, cellulose or other biopolymers.

Based on the PLA bioplastic packaging market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
