Abstracts

The plasma arc is ionized by ionization to generate a high-temperature ion gas stream, which is ejected from the pores of the nozzle and compressed to form a slender arc column. The temperature is reachable, higher than the conventional free arc, such as: argon arc welding only up to 5000- 8000K. Because the plasma arc has the characteristics of slender arch and high energy density, it has a wide range of applications in the field of welding.

Based on the Plasma Welding Machines market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
