Abstracts

Plastic Optical Fiber (POF), typically uses PMMA (acrylic), a general-purpose resin as the core material, and fluorinated polymers for the cladding material. In large-diameter fibers, 96 percent of the cross-section is the core that facilitates the transmission of light. Although quartz fiber is widely used for infrastructures, POF has been called the 'consumer' optical fiber. This is due to the fact that costs of POF, associated optical links, connectors and installation costs are low.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Plastic Optical Fiber(POF) market covering all its essential aspects.

For the competitive landscape, the report also introduces players in the industry from the perspective of the market share, concentration ratio, etc., and describes the leading companies in detail, with which the readers can get a better idea of their competitors and acquire an in-depth understanding of the competitive situation.
