Abstracts

Plastic Optical Fiber (POF), typically uses PMMA (acrylic), a general-purpose resin as the core material, and fluorinated polymers for the cladding material. In large-diameter fibers, 96 percent of the cross-section is the core that facilitates the transmission of light. Although quartz fiber is widely used for infrastructures, POF has been called the 'consumer' optical fiber. This is due to the fact that costs of POF, associated optical links, connectors and installation costs are low.

Based on the Plastic Optical Fiber(POF) market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
