Abstracts

Plastics can be used in many internal components of electric vehicles, such as cabin components, such as dashboards and components under the hood, including fans, pumps and energy recovery devices. The battery case can also be made of plastic to reduce the overall weight of the battery. Today's thermoplastics are extremely rugged and resistant to chemical attack, extreme high and low temperatures, flame retardant (FR) and UV radiation. Plastic parts are cheaper than metals, which can help electric vehicle manufacturers control costs and maximize profits.
