Abstracts

The Plate and Frame Heat Exchangers performance of the plate-type heat exchanger is superior to that of the tubular heat exchanger. Due to its structural characteristics, the fluid can reach the turbulent state at a lower speed, thereby enhancing heat transfer. The plate surface heat exchanger is made of sheet metal, which can reduce the equipment cost when mass production is performed, but its pressure resistance is worse than that of the tube heat exchanger.

Based on the Plate and Frame Heat Exchangers market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
