Abstracts

The point of Care Diagnostics is medical testing performed at the clinical laboratory in close proximity to where the patient is receiving care. POCT is usually performed by non-laboratory persons and the results are used for clinical decision making. Point-of-care technologies may enhance the management of different diseases and conditions. The point of Care diagnostics is of great importance in developing countries. Unfortunately, a major aspect in developing countries is that they often lack modern laboratories, fully automated instruments that provide highly reproducible, quantitative, and hence sensitive and accurate diagnostic results. In order to circumvent these issues, the emergence of rapid and easy-to-use point-of-care (POC) tests can dramatically enhance a physician's ability to diagnose patients' diseases rapidly and accurately.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Point-of-Care Diagnostics market covering all its essential aspects.
