## Abstracts

The point of Care Diagnostics is medical testing performed at the clinical laboratory in close proximity to where the patient is receiving care. POCT is usually performed by non-laboratory persons and the results are used for clinical decision making. Point-of-care technologies may enhance the management of different diseases and conditions. The point of Care diagnostics is of great importance in developing countries. Unfortunately, a major aspect in developing countries is that they often lack modern laboratories, fully automated instruments that provide highly reproducible, quantitative, and hence sensitive and accurate diagnostic results. In order to circumvent these issues, the emergence of rapid and easy-to-use point-of-care (POC) tests can dramatically enhance a physician's ability to diagnose patients' diseases rapidly and accurately.

Based on the Point-of-Care Diagnostics market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
