Abstracts

The polyacrylate elastomer is superior to nitrile rubber or SKF Duralip in heat resistance. Polyacrylates have an operating temperature range of -40 to $+150$ °C (-40 to $+300$ °F) and in some liquids, the upper limit is $+175$ °C (345 °F). Polyacrylate seals are resistant to aging and ozone and are suitable for use with lubricants containing EP additives. Such seals are not suitable for use in applications such as water, acid or alkali. Dry friction should be avoided.

Based on the Polyacrylate Elastomer market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
