Abstracts

The molecular structure of POE is similar to that of EPDM. Therefore, POE also has excellent properties such as aging resistance, ozone resistance and chemical resistance. By crosslinking POE, the heat resistance temperature of the material is improved and the permanent deformation is reduced. Small, tensile strength, tear strength and other major mechanical properties have been greatly improved. Multi-purpose POE elastomers can exceed PVC, EVA, SBR, EMA and EPDM, and POE may replace traditional EPDM in the future. Due to the excellent performance of POE, it has been widely used in the automotive industry, wire and cable sheathing, plastic toughening agents, etc.
