Abstracts

Polyphenols are a structural class of mainly natural, but also synthetic or semisynthetic, organic chemicals characterized by the presence of large multiples of phenol structural units. A phenolic acid is a type of phytochemical called a polyphenol. Other types of polyphenols include flavonoids and stilbenes. Phenolic acids are found in a variety of plant-based foods. Resveratrol is a stilbenoid, a type of natural phenol, and a phytoalexin produced by several plants in response to injury or, when the plant is under attack by pathogens such as bacteria or fungi. Sources of resveratrol in food include the skin of grapes, blueberries, raspberries, mulberries, and peanuts. Catechin, also known as tea tannin, catechol, is a general term for flavanols in tea. Catechin is the most important one in tea polyphenols, accounting for about 75% to 80% of tea polyphenols. % is also one of the sources of bitterness of tea.
