## Abstracts

Polysilazane is a polymer in which silicon and nitrogen atoms alternate to form a basic skeleton. Since each silicon atom is combined with two independent nitrogen atoms, each nitrogen atom is combined with two silicon atoms, so the formula  $\{ \text{[R}^{\{1\}} \text{R}^{\{2\}} \text{Si-NR}^{\{3\}} \text{]}_n \}$  occur.  $\{ \text{R}^{\{1\}} \text{R}^{\{3\}} \}$  can be a hydrogen atom or an organic substituent.

Based on the Polysilazane market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
