Abstracts

Polysilicon can be segmented into three divisions by purity grade: Electronic Grade, Medium Grade, and Upgraded Metallurgical Grade. For solar cell applications, polycrystalline silicon is a material for the manufacture of crystalline silicon solar cells that use single crystal or multicrystalline silicon for substrates. For semiconductor applications, polysilicon is converted to monocrystalline silicon, and then to a single crystal plate, and then to integrated circuits that are integrated into electronic components.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Polysilicon market covering all its essential aspects.
