## Abstracts

Polysilicon can be segmented into three divisions by purity grade: Electronic Grade, Medium Grade, and Upgraded Metallurgical Grade. For solar cell applications, polycrystalline silicon is a material for the manufacture of crystalline silicon solar cells that use single crystal or multicrystalline silicon for substrates. For semiconductor applications, polysilicon is converted to monocrystalline silicon, and then to a single crystal plate, and then to integrated circuits that are integrated into electronic components.

Based on the Polysilicon market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
