Abstracts

Population Health Management is the aggregation of patient data across multiple health information technology resources, the analysis of that data into a single, actionable patient record, and the actions through which care providers can improve both clinical and financial outcomes.

Population Health Management (PHM) seeks to improve the health outcomes of a group by monitoring and identifying individual patients within that group. Typically, PHM programs use a business intelligence (BI) tool to aggregate data and provide a comprehensive clinical picture of each patient. Using that data, providers can track, and hopefully improve, clinical outcomes while lowering costs.
