Abstracts

Ceramic membranes are fabricated through inorganic particles such as alumina, titania, silicon carbide, and few glassy particles. Zirconia and titania are more stable than silica and alumina. Ceramic membranes usually have an asymmetrical structure with multiple porosity levels. There are two types of ceramic membranes: Dense and porous. Based on the layers, several pore sizes are available for specific filtration needs such as ultrafiltration, microfiltration, and nanofiltration.

Based on the Porous Ceramic Membrane market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
