Abstracts

Portable Evaporative Coolers is a device that cools air by evaporating water. Evaporative cooling differs from typical air conditioning systems in that it uses a vapor compression or absorption refrigeration cycle. Evaporative cooling uses the fact that water will absorb a relatively large amount of heat for evaporation (i.e., it has a large evaporation enthalpy). By the phase change (evaporation) of liquid water to water vapor, the temperature of the dry air can be significantly reduced. This can use less energy to cool the air than cooling. In extremely dry climates, evaporative cooling of the air has the added benefit of using more moisture to regulate the air and making the building occupants feel comfortable.

Based on the Portable Evaporative Coolers market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
