Abstracts

A portable oxygen generator or concentrate is a medical device used to supply oxygen to the patients suffering from respiratory diseases. These devices separate nitrogen as well as oxygen from the air in the environment and then discard the nitrogen and supplies 95% pure oxygen to patients through a mask. These portable ones are smaller as compared to stationary O2 concentrators, that allows patients to easily carry the device. In addition to patients, they are also used by climbers and travel in places where this important gas is inadequate.

Based on the Portable Oxygen Generator market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
