Abstracts

Potato harvesters are machines that harvest potatoes. They work by lifting the potatoes from the bed using a share. Soil and crop are transferred onto a series of webs where the loose soil is sieved out. The potatoes are moved towards the back of the harvester on to a separation unit and then (on manned machines) to a picking table where people pick out the stones, clods, and haulms by hand. The potatoes then go on to a side elevator and into a trailer or a potato box.
