Abstracts

Atomic Layer Deposition (ALD) is a thin film fabrication process in which gas phase precursors are introduced into the surface individually and sequentially. Reacting with each precursor of the surface changes the surface function to a new function. It is then reacted with the next precursor in the reaction cycle.

Based on the Powder Atomic Layer Deposition (ALD) market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
