Abstracts

Pre-filled saline syringes are single-dose packet of saline to which a needle has been fixed by the manufacturer. These are medical consumables that are used in hospitals and clinics for clearing intravenous lines (IVs), any medicine or perishable liquids used to keep the arterial lines and entry point clean and sterile. Pre-filled saline syringes are indicated for flushing vascular access devices, a purpose for which syringes may have advantages over vials. For example, they are ready to use, which may reduce the risk of contamination during manipulation, and they are available in several volumes.
