Abstracts

Pressure vessel composites are used to make pressure vessels that are used to store gases and liquids under high pressure. The strength of the container is a key parameter in preventing explosions due to rupture. Composite material is a combination of materials with different macroscopic composition or form. These materials do not dissolve or completely fuse with each other. Composite materials help improve performance. You can also save a lot of material. Therefore, they are in, for example, oil refineries. Atomic reactors, automobiles, gas storage and aerospace industries are most in demand.
