Abstracts

Prestressed concrete cylinder pipe (PCCP) consists of a concrete core, a thin steel cylinder, high tensile prestressing wires, and a mortar coating. Concretes high compressive strength and steels high tensile strength forms a durable structure that can stand extreme condition. The thick mortar coating on the pipe protects the steel cylinder, joint rings, and pre-stressing wire from corrosion, which makes it ideal for water transmission, municipal wastewater applications, and industrial piping. PCCP does not require any bracing, compacted bedding, trucking in aggregate, unshrinkable fill, and welding, which makes it easier and economical to install.

Based on the Prestressed Concrete Cylinder Pipe (PCCP) market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
