## Abstracts

The printed circuit board (PCB) is an independent module that connects electronic components present in various devices such as common beepers, computer systems, and radios. PCBs are the base for connecting various electronic devices and components to each other electrically by using tracks, signal traces or conductive pathways. It allows signals and power to be passed among physical devices. Most PCBs are made primarily from fiberglass or glass-reinforced plastics with copper traces. They provide a platform for the placement and interconnection of diverse components, modules and subsystems in electronic devices.
