## Abstracts

Processed meat is considered to be any meat which has been modified in order either to improve its taste or to extend its shelf life. Methods of meat processing include salting, curing, fermentation, and smoking. Processed meat is usually composed of pork or beef, but also poultry, while it can also contain offal or meat by-products such as blood. Processed meat products include bacon, ham, sausages, salami, corned beef, beef jerky, canned meat and meat-based sauces. Meat processing includes all the processes that change fresh meat with the exception of simple mechanical processes such as cutting, grinding or mixing. IARC at the World Health Organization classifies processed meat as a Group 1, carcinogenic to humans, since it has found sufficient evidence that consumption of processed meat by humans causes colorectal cancer.
