Microphone is an energy converter that converts sound signals into electrical signals. It is transliterated from 'Microphone'. The professional microphone is different from the ordinary civilian microphone, and its sound quality can really reach the studio level. At present, the common professional microphones on the market are divided into two types, one is the dynamic microphone, and the other is the condenser microphone. Professional microphones can be selected according to different occasions and requirements, and are usually used in performance, recording, conference hosting/interview, voice/game live broadcast and other fields. Among them, live performances use dynamic microphones, and condenser microphones are often used in professional recording studios and some professional audio studios because of their more sensitive reception.
