Abstracts

The prosthesis is an artificial device that replaces missing parts of the body that are lost due to trauma, disease or congenital diseases. A prosthetic foot is one of them, and the material in the prosthetic foot varies depending on the level of activity. Wood, plastic, and foam are usually designed in the form of feet and are suitable for people with low levels of activity and who need stability. Carbon fiber feet meet the functional requirements of shock absorption and energy efficiency and are lightweight. Based on the Prosthetic Foot market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.
