Abstracts

Protamine sulfate is a white, light grayish yellow amorphous or crystalline powder. Soluble in hot water, ammonia, dilute acid, hardly soluble in water, ethanol, insoluble in chloroform and ether. The acidic group of heparin is an essential group for maintaining heparin anticoagulant activity, and protamine can rapidly bind to the acidic group of heparin so that heparin loses anticoagulant activity. It can be used as a heparin antagonist in treatment, and can also be used to form a complex with insulin and cortisol, and can be used to formulate a long-acting preparation.

Based on the Protamine Sulfate market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
