Abstracts

The protective & marine coatings are used to guard the base construction materials from corrosion and moisture. These coatings, when regularly applied, offer a long-range protection that extends the life expectancy of a structure. There are various types of equipment & buildings that require a protective and/or finish coating, based on environmental requirements and materials involved. Marine coatings play a key role in protection from corrosion. They have the ability to protect effectively against oxidization for several years, which depends on technical parameters such as fundamental corrosion protection through galvanic, barrier or inhibition effects, enhanced adhesion properties, higher mechanical strength, and crack-resistant properties.
