## Abstracts

Synthetic leather is a man-made artificial leather that looks like natural leather. It is also known as faux leather. Its surface is treated and dyed with certain additives to provide them a natural look just as natural leather. Nowadays synthetic leather has gained widespread popularity and is often used as a substitute for real leather because it is less expensive and does not require any real animal hide. Synthetic leathers are available in a variety of colors, leading to them being used in a wide number of industries such as footwear, automobile, garments, and fashion accessories such as bags, wallets, etc. In addition, synthetic leather is cheaper than natural leather and superior to real leather in terms of its diversity in looks and use; therefore it has become the popular choice for many manufacturers active in the automobile and footwear industry.
