PKI is a security technology framework of encryption and cybersecurity that helps secure the communication between the server and the client. The technology works using 2 different cryptographic keys, namely, a public key and a private key. To communicate over the website, the public key has to be supplemented with a private key that is held by a trusted party. It protects the user's information from theft or tampering. To achieve secure communication, organizations are adopting the Secure Sockets Layer (SSL) certificate that uses public key infrastructure for encryption and authentication. The certificates issued by certificate authorities are trusted and can be used to authenticate entities. The trust hierarchy in issuing digital certificate includes various entities, such as root certificate authority, intermediate certificate authorities, and issuing certificate authorities.
