Abstracts

Radial drilling is an innovative, economical and environmentally friendly technology that can drill multiple micro-diameter horizontal wells at different depth levels of existing wells. In radial drilling techniques, high velocity hydraulic jet fluid is injected to drill side holes in the reservoir. Here, multiple side holes are drilled from existing wells (also known as parent wells) at different levels or depths. The depth and direction of the micropore diameter to be drilled is based on the economically viable hydrocarbon volume present in the reservoir, which can reduce the cost of radial drilling.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Radial Drilling market covering all its essential aspects.
