## Abstracts

Radial drilling is an innovative, economical and environmentally friendly technology that can drill multiple micro-diameter horizontal wells at different depth levels of existing wells. In radial drilling techniques, high velocity hydraulic jet fluid is injected to drill side holes in the reservoir. Here, multiple side holes are drilled from existing wells (also known as parent wells) at different levels or depths. The depth and direction of the micropore diameter to be drilled is based on the economically viable hydrocarbon volume present in the reservoir, which can reduce the cost of radial drilling.

Based on the Radial Drilling market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
