Abstracts

Radomes are structures or enclosures designed to protect an antenna and associated electronics from the surrounding environment and elements such as rain, snow, UV light, and strong wind. The name 'radome' is derived from the words radar and dome.

Radome enhances the pointing accuracy of antenna systems by offsetting negative impacts of UV degradation, wind load, or build-up of snow and ice. The key functionality of these structures is to extend the system's ability to perform under adverse conditions while creating a safe working environment.
