Abstracts

Railway CCTV System also called Video Surveillance, is normally IP based in order to provide security solutions on railway stations, platforms, trains, cabins and passenger areas. System basically consists of different types and several cameras and monitors. To prevent machines damage in harsh environment, a specific memory and storage modules are also important.

The Forward and Rear Facing Closed Circuit Television Camera System (FF-CCTV) at the front and rear of the train provide real-time view for driver. Its recording provides information on what has happened in the view of driver. It can be used as evidence for police in case of any accident. Driver Car Cameras system (DC-CCTV) provides surveillance for immediate image capture of driver's action. Passenger Areas Cameras (PA-CCTV) system offers real-time monitoring of all the vehicles of the train and allows several actions on the captured images as recording, replaying and viewing in a remote site as Operating Control Center (OCC).
