Abstracts

Real-time locating systems (RTLS) are used to automatically identify and track the location of objects or people in real time, usually within a building or other contained area.

Real-time location system (RTLS) is one of many techniques for detecting the current geographic location of a target, possibly from the vehicle to the manufacturing plant. The use of RTLS products for more and more industries, including supply chain management (SCM), health care, military, retail, entertainment and postal and courier services.

Planning and managing the flow of inbound raw materials and outbound finished goods through your supply chain is a challenge. Materials are often inappropriately shipped or stored, which can damage sensitive goods.
