Abstracts

Carbon black, is the first commercial nano-material, and comes in a variety of grades depending on the end application. 90% of all carbon black produced is used in rubber applications where it acts as a reinforcing filler. Furthermore, carbon black is also used as a black pigment in everything from plastics to mascara. Carbon black is also electrically conductive and can therefore be used to handle static electricity. Moreover, the addition of carbon black gives UV-protection to a material and reduces the need for UV-protective additives.
