Abstracts

Carbon black, is the first commercial nano-material, and comes in a variety of grades depending on the end application. 90% of all carbon black produced is used in rubber applications where it acts as a reinforcing filler. Furthermore, carbon black is also used as a black pigment in everything from plastics to mascara. Carbon black is also electrically conductive and can therefore be used to handle static electricity. Moreover, the addition of carbon black gives UV-protection to a material and reduces the need for UV-protective additives. Enviro's focus is to recover carbon black first of all for re-use as a reinforcing filler in rubber materials.

Based on the Recycled Carbon Black market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
