Abstracts

Recycled polyester is a relatively new trend in the eco fashion industry. It's far from sustainable. Recycled polyester is toxic to the earth and the wearer. Among the trend is recycled plastic bottles being turned into fabrics which are considered sustainable to keep from them piling in the landfills. If plastic bottles don't belong in the landfills, they certainly don't belong on the body.

Unlike polyester, recycled polyester uses PET as the raw material. This is the same material that is used in clear plastic water bottles, and recycling it to create the fabric prevents it from going to landfill.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Recycled Polyester market covering all its essential aspects.
