## Abstracts

Recycled polyester is a relatively new trend in the eco fashion industry. It's far from sustainable. Recycled polyester is toxic to the earth and the wearer. Among the trend is recycled plastic bottles being turned into fabrics which are considered sustainable to keep from them piling in the landfills. If plastic bottles don't belong in the landfills, they certainly don't belong on the body.

Unlike polyester, recycled polyester uses PET as the raw material. This is the same material that is used in clear plastic water bottles, and recycling it to create the fabric prevents it from going to landfill.

Based on the Recycled Polyester market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.

In chapters 8-13, we update the timely industry economic revitalization plan of the country-wise government.
