Abstracts

Coral is the external skeletal remains of a tiny animal called the 'coral polyp,' which is a sea creature shaped like a tube. It's in the organic gem category, like other stones made from nature, including pearls, amber and jet. Thousands of these polyps live in the ocean on remains of other polyps, which create huge underwater coral reefs. Most coral is harvested from the Mediterranean Sea and areas of the Pacific Ocean near Japan and Taiwan.

Based on the Red Coral jewelry market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
