Abstracts

Refractory bricks, also known as fire bricks, are bricks made of heat-resistant ceramic materials that are similar in shape to ordinary building bricks and are therefore commonly used in construction furnaces and various thermal equipment. On the one hand, refractory bricks do not have chemical changes at high temperatures, and are generally materials with poor heat conduction. Usually dense refractory bricks are used under conditions of extreme mechanical stress, chemical stress and thermal stress, such as wood-fired kiln or furnace, which are easily worn by wood, contaminated with ash or slag, and high temperature conditions.
