Abstracts

Remote DDoS protection is simply an anti-ddos service that protects your website from DDoS attacks without any changes to your hosting. This may be hard to wrap your head around, but it's really simple. When you activate remote DDoS protection with any provider they will make a change to your DNS to point the traffic coming to your website to their IP. This has two purposes:

- 1.to hide your real IP from the attackers;
- 2.to proxy traffic through their anti-ddos mitigation system
